

Luis Felipe Rodriguez Rico
Backend Developer — Java & Services Optimization
luisfeliperico19@gmail.com | github.com/ELIMSS50 | LinkedIn

Professional Profile

Backend Developer focused on analysis, optimization, and stabilization of production services. With over a year of hands-on experience resolving critical production incidents, I have a solid command of **Java** applying object-oriented programming, collections, and structured exception handling. Specialized in consuming, modifying, and integrating **RESTful APIs**, optimizing SQL queries, and mitigating high server resource usage through efficient algorithmic logic.

Technical Skills

Languages	Java, C#, Python, TypeScript, C++
Frameworks/Lib	Spring Boot, FastAPI, Node.js, React, Bootstrap
Databases	MySQL, PostgreSQL, SQLite, MongoDB (Atlas)
Tools	Git, REST APIs, Docker, Cloudflare
Methodologies	Scrum, Kanban, Legacy Code Refactoring, Technical Documentation

Professional Experience

Backend Developer & Data Analyst <i>2025 – Present</i> - Actively participated in analysis, development, and testing workflows for stabilizing production services and refactoring complex legacy flows. - Consumed, integrated, and modified RESTful service flows for data extraction automation, mitigating high server resource usage and optimizing existing infrastructure. - Efficiently identified root causes of performance issues in relational databases, reducing processing times by 70% through SQL query optimization.	NRTEC Desarrollos Tecnológicos
Data Analyst (Hackathon) <i>2025</i> Led the <i>feature engineering</i> phase under NDA: exploratory data analysis (EDA) on raw data, complex pattern detection, and construction of normalized datasets for predictive models, with iterative deliveries under agile methodologies.	Hackathon Magna
Contestant <i>2025</i> Solved complex logic problems using advanced data structures and algorithmic optimization under high time pressure in collaborative environments.	ICPC — Competitive Programming

Education

Computer Engineering Universidad Autónoma de San Luis Potosí	<i>2021 – December 2026</i> <i>Full-time availability</i>
--	--

Featured Projects

Smart Cafeteria System | github.com/ELIMSS50/BeanRush
Full-stack platform with a **Node.js** backend, **MongoDB Atlas** persistence, role-based access control, and automatic notifications via **Gmail API**. Modular architecture with REST endpoint consumption and role-based authorization logic. (**Angular**, **Node.js**).

Languages

English B1 (Intermediate)
